Hello,
Thanks to sandbox concept, I have several UPP versions on my Linux computer.
When I open a progect created in the latest UPP in an old one (15260 - the latest stable),
the .lay file gets corrupted: all national symbols are distorted.
I noticed that in the new version all class names in .lay files are prefixed with UPP::
In old .lay files there are no prefixes.

Best regards.

Victor
