View Forum Message <> Reply to Message

Helllo,

It seems that the control4U (downloaded from UppHub)does no longer contain PolyXml and I get error when compiling my project with UPP15760. :(

Is there a solution ? :p

Thank you in advance for your reply and advice

Dear BioBytes

Controls4U still has PolyXML.h.

As far as I can see, Bazaar is no longer in the nighty builds and can only be obtained from svn. Please try to download the packages from there, as UppHub is still in preparation.

Dear Koldo,

Thank you very much for your reply and advice. It helps greatly. :)

Have a good day

Hello,

I updated my system to 15786 version and still have issue with Control4U. The uppHub says that the library is installed but the directory is empty and the system cannot find the sysexec.h header

:(

See screenshots below. It could help in understanding the issue.

Thank you in advance for advice

Have a nice evening

Hi,

this should be fixed, reinstall Functions4U pls...

Hello Mirek,

Below see a screenshot showing that the Control4U package is still empty even after having reinstalled the library using uppHub.

Hope it could help

Thank you in advance for advice :)

Hi All,

I can see the problem now, Please check screenshot below

The path of the repo is not correct for Control4U (it indicates Function4U instead of Control4U).
Therefore theide cannot find the directory files which remains empty. :(

Please correct it

Thanks in advance

Cheers

Hello BioByte,

Could you remove UppHub directory completely and try to download Controls4U one more time. You can find directory path in settings:

Also, can you check if you have Controls4U examples. You can verify it in PackageManager by selecting "Controls4U" assembly (right to "Main packages" DropList and left to "Search" edit field). If everything is there, you could try to remove "Controls4U" package from your project and add it one more time.

I made above tests and Controls4U on clean UppHub is downloaded correctly.

Hello,

Here is the screenshot presenting where you could find Controls4U examples:

Is not it possible that Control4U is the first yellow line?

In any case, assuming that you have reinstalled everything (like downloaded nightly ide, then installed Controls4U in clean install) and it still does not work, we definitely need to track it down!

On possible tricky catch that comes to mind: If it was in broken state before and you have tried to add Controls4U, you might have accidentally created it in the first nest, empty. Can you check that there is no Controls4U folder in your first nest?

Hi,

I had encountered a seemingly similar problem when I first tested Upphub/Controls4u. In my case the culprit was the "bazaar assembly" itself.

The problem was solved after I'd removed the bazaar entry from the assemblies section in the main package selection screen.

Best regards,
Oblivion

Thanks to all for trying to help :)

Quote:Is not it possible that Control4U is the first yellow line?

Mirek, please see the screenshot below showing that no Control4U is visible in the repository.

Quote:Could you remove UppHub directory completely and try to download Controls4U one more time. You can find directory path in settings

Klugier, I deleted the uppHub directory in my Upp installation. Then I reinstalled the Control4U package from the starting splashscreen and the same problem happened. :(

Here is the structure of my uppHub

Quote:I had encountered a seemingly similar problem when I first tested Upphub/Controls4u. In my case the culprit was the "bazaar assembly" itself.

The problem was solved after I'd removed the bazaar entry from the assemblies section in the main package selection screen.

Oblivion, I did not have a bazaar entry in the assemblies section as shown below.

So I have no idea of what is happening as other packages, except Control4U/SysExec are correctly installed

Thank you for more advices

You still not have checked that there is no Functions4U empty package in your MyApps directory...

Given all that you have written, that is the most likely culprit.

Sorry but I am not sure to understand :blush: . Could you please give more details ?

Thanks in advance

MyApps is a folder. Check what subfolders really are in that folder (using OS file manager).

Mirek

Thank you very much Mirek. Ok I understand now. I have copied the content of the uppHub in MyApps folder and Control4U package is now available :p See below.

The only problem :? which remains concerns SysExec which is not available from uppHub downloads. See the picture herehunder.

Waiting for your advice and many thanks in advance

Have a good day

Thank you very much Mirek. Ok I understand now. I have copied the content of the uppHub in MyApps folder and Control4U package is now available :p See below.

Actually, you completely misunderstood. You were supposed to "Check what subfolders really are in that folder (using OS file manager).", not to copy anything, that completely spoiled everything (including your MyApps folder).

Ok my mistake. Here is the content of MyApps folder

Here is the splashscreen visible when Upp starts and the configuration of MyApps

The problem is that SysExec is not part of UppHub. The same issue will appear when using Scatter library!!

Sorry that there is still a problem

Biobytes

Well, I am really intrigued by what this might be....

I have an idea: As long as you have the whole U++ in single folder, could you copy it somewhere, delete .exe, delete out folder, delete any of your's sources you do now want me to see, .zip and upload somewhere? (e.g. google drive)

Hi Mirek,

Here is the link to my Upp installation (Out and bin directories and theide.exe have been deleted)

https://   drive.google.com/file/d/1ZEe-FtXUdek5en3rXqMICJPuuxaIPVFW/vi ew?usp=sharing

I do not know whether you need to check my projet source (IVDManager) for which I have the problem of SysExec missing files. Let me know and I will post it the same way. :)

Thank you very much for considering this issue

Looking forward to hearing from you

Ah, sorry. I have confused SysInfo and SysExec. You are correct, we probably should add SysExec.

Hi Mirek,
Everything is working perfectly now with Upp 15802. Thank you for solving this issue :) . Hope that Scatter will be added to UppHub in future. :nod:

Have a good week-end
