Hi all,

any way for integrate in a single cell of ArrayCtrl an existing Ctrl object? For example an already defined EditString or DropDate?

With ArrayCtrl there are a lot of examples and references, but most of them oriented to assign an editor for a defined column. There are even some examples for assing an editor to a single cell, but I don't found a way to assign to a single cell an object with it's own name.

Example

```
dpDate DropDate;  
acRows ArrayCtrl;
```

...

```
ac.Add(...);  
ac.Add(..., dpDate);
```

Thanks

Nothing. My brain it's getting old. Forget all.

Thanks.

Hello mubeta,

Try this:

```
#include <CtrlLib/CtrlLib.h>  
  
using namespace Upp;  
  
struct MyApp : TopWindow {
```

```

ArrayCtrl array;
MyApp()
{
    Sizeable().Zoomable().CenterScreen().SetRect(0, 0, 800, 600);
    Add(array.SizePos());

    array.AddColumn("Index").WithLined([=](int i, One<Ctrl>& c){
        if(i % 2 == 0)
            c.Create<DropDate>();
        else {
            DropDownList& l = c.Create<DropDownList>();
            l.Add("a").Add("b").Add("c");
        }
    });
}

for(int i = 0; i < 10; i++) {
    array.Add(i);
}
};

GUI_APP_MAIN
{
    MyApp().Run();
}

```

Best regards,  
Oblivion

Thankyou for your reply, but, as I wrote, the problem was only an me. when the editor is integrated in the ArrayCtrl, the data value is owned by the Array, not by the editor, so I was confuse for some time for develop my needs.
