Hello U++ !

Is there a way in U++ to do hashing of String during compilation ?

```
#include <Core/Core.h>
```

```
using namespace Upp;
```

```
CONSOLE_APP_MAIN
```

```
{  
    Cout() << GetHashValue ("Hello") << EOL; //Runtime hashing  
    Cout() << HASH64("Hello") << EOL; //Compile time hashing  
    //Both value printed should be identique  
}
```

Not right now. But you can try to reimplement function `hash_t memhash(const void *ptr, size_t count)` as `constexpr`.
If you do that it will be possible to call it at compile time.

If you do that it will be possible to call it at compile time.

NOTE: String is not using (only) `memhash`, so the value would not be the same.
