Hello,

I want to use MIT's mitielib library on my project. I compiled the project successfully but cant run it. It gives "Linking has failed" error when click to execute button on IDE.

I followed these steps.

1. Build mitielib binary files according to this instruction <https://github.com/mit-nlp/MITIE>

```
cd mitielib
```

```
mkdir build
```

```
cd build
```

```
cmake ..
```

```
cmake --build . --config Release --target install
```

mitie.dll and mitie.lib files created after build process.

2. Entered new created dll and lib files location on IDE setting. Added Lib, Include and Bin file locations from Setup/Build Methods menu.

3. Created a new project and added sample from mitielib.

[https:// github.com/mit-nlp/MITIE/tree/master/examples/cpp/train_text_categorizer](https://github.com/mit-nlp/MITIE/tree/master/examples/cpp/train_text_categorizer)

4. Compiled successfully

5. Tried to run, failed with "linking has failed" error

Can you help me whats wrong or forgotted while using 3rd party libraries.

Regards,
