Subject: Linking has failed using mitielib
Posted by nodebot on Tue, 02 Mar 2021 15:37:27 GMT

Hello,

I want to use MIT's mitielib library on my project. I compiled the project successfully but cant run it. It gives "Linking has failed" error when click to execute button on IDE.

I followed these steps.
1. Build mitielib binary files according to this instruction https://github.com/mit-nlp/MITIE
cd mitielib
mkdir build
cd build
cmake ..
cmake --build . --config Release --target install

mitie.dll and mitie.lib files created after build process.

2. Entered new created dll and lib files location on IDE setting. Added Lib, Include and Bin file locations from Setup/Build Methods menu.

3. Created a new project and added sample from mitielib.
https:// github.com/mit-nlp/MITIE/tree/master/examples/cpp/train_text _categorizer

4. Compiled successfully

5. Tried to run, failed with "linking has failed" error

Can you help me whats wrong or forgotted while using 3rd party libraries.

Regards,
