I have finally finished my "anboto update utility", which means all Koldo's packages should now at the level of his splinter Anboto library.

Please test!

Also, looking for volunteer who would add proper information to README.md files to these packages (and eventually continued doing these updates).

Hello Mirek,

It seems that several Anboto UppHub package do not have examples previously present in uppsrc/bazzar:
- Scatter
- Eigen

I see that you removed examples from reference and examples assemblies, but you didn't move it to Libraries4U packages. I will do it by myself, but I do not want to break synchronization.

Klugier

I see them:

https://github.com/Libraries4U/Scatter/tree/main/examples

Note: The process basically copies everything exactly from anboto, including examples, except README.md files.

You cannot break it, you can always push to Libraries4U. However, only README.md will survive...
