Hi,

Small change required in Vcont.h @Line 195

Original

T& Add(const T& x) { return items < alloc ? *(new(Rdd()) T(x)) : GrowAdd(x); }

Changed

T& Add(const T& x) { return items < alloc ? *(new(Rdd()) T(clone(x))) : GrowAdd(clone(x)); }

Also Change in Vcont.hpp file @line 140

Original

T *q = new(Rdd()) T(x);

Changed

T *q = new(Rdd()) T(clone(x));

Well, I believe this would allow

```
Vector<Vector<int>> vv;
Vector<int> v;
...
vv.Add(v);
```

with silent deep copy performed. This is something we want to avoid. We want you to be explicit and either use

```
vv.Add(pick(v));
```

or

```
vv.Add(clone(v));
```

Add(const T&) variant is reserved for types with full copy semantics (e.g. int or String).
