Subject: QTF Centered in ArrayCtrl header Posted by mdelfede on Fri, 23 Apr 2021 14:42:34 GMT

Hi,

this line

kCtrl.AddColumn(t_("\1[G1= Service&class]")).Margin(0).NoEdit().HeaderTab();

Should add a centered text inside a ArrayCtrl column header... it used to work last time I compiled my application; now it doesn't and displays a blank line.

Something is happening, because if I change text size (example G6) it does increase the cell, but the content is blank.

If I remove the '=':

kCtrl.AddColumn(t_("\1[G1 Service&class]")).Margin(0).NoEdit().HeaderTab();

it works, but of course the text is left-justified.

It's a bug or am I missing something?

EDIT: I tested also with < (left align) and it works; > (right align) doesn't. It seems that the cell width

is wrong when calculating text position.

EDIT2:

Modifying the code as:

kCtrl.AddColumn(t_("\1[G1

Service&class]")).Margin(0).NoEdit().HeaderTab().SetAlign(ALIGN_CENTER);

(so, semove the '=' and add SetAlign() call) the text is 'centered', i.e. the first line ('Service') is centered

but the second is left aligned with 'Service' word:

First wird Second

and not

First word second

Here a screenshot with the SetAlign(); you can see that the "word block" is centered, and not the single words.

Before, with '=' in QTF, single words were correctly centered.

You can also see the effect of '=' on 4 column: the text is gone.

Should be ok now.

(It was the classical situation when fixing something breaks something else. That said, the change was in 2014 if I read the log correctly...)

Thank you, Mirek!

2014 ? I'm becoming old guickly... :roll:
