Subject: QTF Centered in ArrayCtrl header

Hi,

this ljne

```
 kCtrl.AddColumn(t_("\1[G1= Service&class]")).Margin(0).NoEdit().HeaderTab();
```

Should add a centered text inside a ArrayCtrl column header... it used to work last time I
compiled my application; now it doesn't and displays a blank line.
Something is happening, because if I change text size (example G6) it does increase the cell,
but the content is blank.
If I remove the '=' :

```
 kCtrl.AddColumn(t_("\1[G1 Service&class]")).Margin(0).NoEdit().HeaderTab();
```

it works, but of course the text is left-justified.

It's a bug or am I missing something ?

EDIT: I tested also with < (left align) and it works; > (right align) doesn't. It seems that the cell
width
is wrong when calculating text position.

EDIT2:
Modifying the code as:

```
 kCtrl.AddColumn(t_("\1[G1
Service&class]")).Margin(0).NoEdit().HeaderTab().SetAlign(ALIGN_CENTER);
```

(so, semove the '=' and add SetAlign() call) the text is 'centered', i.e. the first line ('Service') is
centered
but the second is left aligned with 'Service' word:

```
   First wird
   Second
```

and not

```
   First word
    second
```

Here a screenshot with the SetAlign(); you can see that the "word block" is centered, and not the single words.
Before, with '=' in QTF, single words were correctly centered.
You can also see the effect of '=' on 4 column : the text is gone.

Should be ok now.

(It was the classical situation when fixing something breaks something else. That said, the change was in 2014 if I read the log correctly...)

Thank you, Mirek !
2014 ? I'm becoming old quickly... :roll:
