Hi everyone!

Recently, I have been developing a cross-platform UI program using U++.

Btw, I have faced a problem on mac os.

The gdb debugger is not working on mac os catalina.

Please give me an answer if anyone knows how to handle this problem.

Thanks in advance.

This is a known problem.

You can try to use something else for debugging. My personal choice - vim + gdb plugin.

BTW, Upp has different tool for debugging: RDUMP and RLOG (in different combinations).

They are, actually, very handy ...

Thank you for your answer.

I will try with those.

Another useful function call:

```
StdLogSetup(LOG_COUT|LOG_FILE);
```

It will send logs to stdout in addition to a log-file.
