Hi,

it is possible to show a file and put the selection in it, after opening the folder as below (just select a file with the resource below)

```
ShellOpenFolder("C:\\folderA\\subfolder");
```

(how to select a file after open folder?)

Thanks

Hi, this work windows 10!

load the explorer and select (only) a file

```
String strArgs = "/select, C:\\FolderA\\subFolder\\file.txt";

ShellExecute(0, "open", "explorer.exe", strArgs, 0, SW_NORMAL);
```

Thanks
