Hi!

Once again, many thanks Mirek and everyone else involved here!

Best regards,

Tom

Hello,

We decided to also make release on GitHub. So, this is another place from which you can download your favorite framework

What about switching development to GIT ? It would ease patch submissions...

What do you think was the one of main drivers for bazaar->UppHub transition?

Anyway, not quite there yet...

Hi,

Thank you all for this great framework!

Best regards,
Oblivion

Hi,

BTW, I just noticed that the ultimatepp.org front page has not been updated to show this as the latest release.

Best regards,

Tom

While on the subject, 'Status & Roadmap' -page needs some fine tuning too...

BR,

Tom

BR,

Tom

Already done yesterday.

(Seriously, I am really behind with PR once again. Codeproject articles need update to generate some.)

Hi,

Almost there... just the Download panel on the front page to go:

Current release: 15260
Best regards,

Tom

EDIT: More: Just noticed that at least under Linux the Download links/buttons on both front page and download page start downloading 15260 from SourceForge.

Thinking about this, maybe it would be easier for maintenance to make all Download links on front page:
- to point to upp download page
- not contain any version info

Also, the first Download! button could read 'Download U++ 2021.1' This way, when releasing, you just need to update the download page at one location and that's it.

Hello,

The "Current Release" version on the main page - should be fixed tomorrow. Thanks for report Tom! Backing to the green button it seems that the wrong current version is set on SourceForge. Following link https://sourceforge.net/projects/upp/files/latest/download points to 2020.2 instead of 2021.1. This one can only be fixed by Mirek. I do not have access to Sourceforge site.

Hi there,
I was testing 2021.1 and I noticed that ScatterCtrl and ScatterDraw packages are missing (I have the directories in uppsrc, bu they are empty), it's just me or they have been moved?
Regards,
gio
