Hello,

While browsing through code I stumbled on Ctrl::ClearModifyDeep() code and I think q->ClearModify() should be replaced by q->ClearModifyDeep() like following: Otherwise the 'deep' stops at first level and does not go further

```
void Ctrl::ClearModifyDeep()
{
    GuiLock __;
    ClearModify();
    for(Ctrl *q = firstchild; q; q = q->next)
        q->ClearModifyDeep();  ----- CHANGE HERE -----
}
```
