Hello

I have thoses enum class :

TiledMap.h

```
enum class TiledOrientation{Orthogonal, Isometrique, IsometriqueEchelonne,
HexagonalEchelonne};
enum class TiledRenderOrder{RightDown, RightTop, LeftDown, LeftUp};
enum class TiledType{Map};
enum class TiledLayerType{TileLayer};
```

When starting to type "Tiled" in my code (in order to use thoses enum by example) I face this :

All the empty name are my enums, if I go on one of them, it work.

Hello Xemuth,

This is, because Mirek stil uses old style enum without class keyword Anyway, for the newly written code, I always use this construction. This is definitly worth to support, especially this feature is with us since 2011 (c++11).

Resources:
- CppCoreGuidelines - Prefer class enums over "plain" enums
