Hello.

I finally started to try to learn UPP. From within the Layout Editor I added a Label and a Button. The basic Layout File then contains:

```
LAYOUT(TryToLearnUPPGUIPartLayout, 864, 652)
  ITEM(LabelBase, Label1, SetText(t_("\nI am a
Label!\n")).SetAlign(ALIGN_CENTER).SetInk(Color(226, 42, 0)).LeftPosZ(340, 72).TopPosZ(64,
52))
  ITEM(Upp::Button, Button1, LeftPosZ(204, 368).TopPosZ(192, 168))
END_LAYOUT
```

When I try to compile this, I always end up with the Error Message

```
C:/Dev/GitRepos/AKKomPolToolUPP/TryToLearnUPPGUIPart/TryToLearnUPPGUIPart.lay (2):
error: 'class Upp::LabelBase' has no member named 'LeftPosZ'
```

Same is true for TopPosZ. I also get this Error:

```
C:/Dev/upp/uppsrc/CtrlCore/lay0.h (59): error: 'class Upp::LabelBase' has no member named
'LayoutId'
```

The only thing I have changed is giving the Items an Name. What am I missing? Thanks in advance!

Hello MeerMusik,

From what you describe, is it possible that you manually type "LabelBase" in the layout editor?

Because LabelBase is not itself a Ctrl. The correct ctrl should be Label or LabelBox. That's why you are getting the error.

Correct items are available under the right click (context) menu -> static submenu.

Or you can select or change them in the dropdown menu:

or you can type Upp::Label, if you prefer to edit the layout file manually.

```
ITEM(Upp::Label, Label1, SetLabel(t_("I am a  
label")).SetAlign(ALIGN_CENTER).SetInk(Color(226, 42, 0)).LeftPosZ(281, 72).TopPosZ(93, 52))
```

Best regards,
Oblivion

No I did not typed that. I did a right click and added it from the Context Menu. No Idea what went wrong. I fixed it now. Also what confused me for a while: In the C++ Header File I have to write "LabelBase Label1" but in the Layout File it is just Upp::Label - guess that is Part of the Charme of UPP. And here I thought Qt was doing some weird mixed things. Seems UPP is doing even more things to achieve that "Less Lines of Code Concept" :)

Thank you anyway!

Hello MeerMusik,

Quote:

Also what confused me for a while: In the C++ Header File I have to write "LabelBase Label1" but in the Layout File it is just Upp::Label - guess that is Part of the Charme of UPP.

Layout file is just a simple C++ file, there is nothing magical, no special processing, really. Only a couple of C++ macros (to simplify templating, and naming).

This:

```
struct MyWindow : TopWindow {  
    Label label1;
```

```

MyWindow()
{
    Title("Window title").Sizeable().Zoomable().SetRect(0,0,640, 400);
    Add(label1. SetLabel(t_("I am a label")).SetInk(Color(226, 42, 0)).LeftPosZ(13, 243).TopPosZ(20, 144));
}
};

```

Layout:

```

LAYOUT(MyWindowLayout, 640, 400)
    ITEM(Upp::Label, Label1, SetLabel(t_("I am a label")).SetInk(Color(226, 42, 0)).LeftPosZ(13, 243).TopPosZ(20, 144))
END_LAYOUT

```

Cpp:

```

#define LAYOUTFILE <MyWindow/MyWindow.lay>
#include <CtrlCore/lay.h>

class MyWindow : public WithMyWindowLayout<TopWindow> {
public:
    MyWindow()
    {
        CtrlLayout(*this, "Window title");
    }
};

```

The layout code does the ctrl instantiating for you. That's all. While the latter may seem complex at first glance, it actually simplifies things a lot, if you build complex GUIs. Not to mention it relies on C++ templating rules so the errors will be caught by the c++ compiler on compile-time.

Best regards,
Oblivion
