Hello,

I have not a Mac machine with the new M1 cpu. I wonder if this new machine can compile programs able to run on previous machine with Intel CPU.

thanks,
Luigi

clang should be able to produce "fat" binaries with all target platforms, the cross-compilation is built-in.
(I have no experience with mac, just what I heard elsewhere)

(on linux I have to install cross-compiler extra, if I want to target other platform)
