They have finalize() method but there is no control over it. It is called when gc thinks it is time to
call it.

Anyway, why Java? With u++ c++ is easy to use..

you are absolutelly right; this is because of work; employer wants developing in Java. In upp is
developing nice but in java... you know. I don't think about that too seriously(for now), but I like
that idea, researching through upp sources and thinking how to produce java like code etc etc....

anyway, do you think, if it is worthy such a 'thing' ???

I was thinking... just thinking...
What would be needed to change in upp to use upp INSTEAD of java...?

Hm, to my surprise, Tom (as he has to maintain some Java applets) has something like
Java/miniU++ - a collection of Java classes loosely resembling U++.

Here it comes...
