Hi folks,

The PieChart can be used to draw pie chart nicely.

Is there any sample code, such that changes in data trigger an update of PieChart without re-draw it again?

Thank you!

Best Regards
David

What do you mean with not re-drawing it? It has to be re-drawn for the image to change. One way is to call Refresh() on your ScatterDraw (or ScatterCtrl) object whenever the data changes. How you do this depends on how your data is organized and what processes cause it to change.
