Subject: flagDEBUGCODE
Posted by mirek on Wed, 21 Jul 2021 13:09:14 GMT

Normally, DLOG, DDUMP, _DBG_, DTIMING etc.. are only allowed in debug mode so they are not "forgotten" in the code (as you cannot build release, you are forced to remove them).

Sometimes however you need to benchmark/debug the code in release mode. Sure we have have RLOG, RDUMP etc... but that brings the risk of forgetting them.

The new solution is DEBUGCODE flag - if main configuration contains this flag, DLOGs are allowed in release mode as well. The idea is that there will will be "testing" configuration (which will not be "main main").
