Subject: Issues with cross-compilation for MacOS on Linux

There is a couple of issues with cross-compilation for MacOS on Linux.
1) Using of COMMON_FLAGS = "OSX" doesn't imply defining of POSIX. Because of that PdfDraw doesn't get linked in.
2) Folder Contents/Resources and file Contents/Info.plist do not get created. This is, probably, not a big deal, but still is an issue.

TIA.
