---

1) Old problem with windres.exe:

```
x86_64-w64-mingw32-windres.exe -i "/home/ssg/dvlp/cpp/user/upp/amap/amap.rc" ...
```

There were errors.

I have an old version of umk where this problem is fixed. Maybe, I fixed it myself.

2) It would be good to store Upp code revision an app was built against, and output it in a "help" message.

Upp has got a bmGIT\_REVCOUNT macro. The problem is that git doesn't use revision numbers, it uses hashes.
