Hello,

In the reference AK package, if the menu "Setup" add `t_("Setup")`, then there are a small box before Setup, if not the `i18n t_`, it will be ok.

The screenshot shows a code editor with several files open: AK.h, ak.icpp, ak.t, setup.cpp, Setup.key, and main.cpp. The code in setup.cpp defines three functions: `App::Fn`, `App::AkMenu`, and `App::MainMenu`. The `MainMenu` function adds a menu item "AK" and a menu item `t_("Setup")`. The `App` constructor calls `MainMenu`. The code in `main.cpp` defines the `T_` and `csCZ` macros for "Czech" and "Setup keys".

```
void App::Fn(String text)
{
    PromptOK(text);
}

void App::AkMenu(Bar& menu)
{
    menu.Add(AK_FN1, [=] { Fn("1"); });
    menu.Add(AK_FN2, [=] { Fn("2"); });
    menu.Add(AK_EXIT, [=] { Close(); });
}

void App::MainMenu(Bar& menu)
{
    menu.Sub("AK", [=](Bar& bar) { AkMenu(bar); });
    menu.Sub(t_("Setup"), [=](Bar& bar) { SetupMenu
}

App::App()
{
    SetupMenu(=) (T_("Czech")
csCZ("Česky")

T_("Setup keys")
csCZ("Nastavit klávesy")

// main.cpp

T_("Setup")
csCZ("Nastavení")
```

The menu box on the right shows the "AK" menu with the "Setup" item selected. The menu items are "English" (Ctrl+E), "Czech" (Ctrl+R), and "Setup keys" (Ctrl+K). A red circle highlights the "Setup" item in the menu.

In the reference AK package, if the menu "Setup" add t_("Setup"), then
there are a small box before Setup, if not the i18n t_, it will be ok.

Thank you, this was a bug (only affects the immediate file where key_source.h is included, that is
why it has escaped the attention...)

Fixed.

Mirek
