What happens when you click Ctrl click on ArrayCtrl header in debug mode and what is it good for?

If I remember correctly it will copy columns widths to the clipboard

Correct. It puts string like ".ColumnWidths("50 119 59 102 61");" into the clipboard. The idea is that you can setup columns witdths this way (as this is something that cannot be done in layout designer).

Well that one was for hard core ArrayCtrl spécialists
I personnaly don't remember ever having heard about it

Very handy, didn't know of this. Been eyeballing/guessing sizes, this makes it a lot easier
