Subject: What happened to verbosity while compiling?

somehow recent versions of u++ do not display the compilation-command even when verbosity is requested. directory-changes and such are displayed, but not the command used for compiling. it would greatly help for finding out "what went wrong" when setting up a new project. maybe add multiple verbosity-levels configured in ide-setup, and use lowest non-zero verbosity-level when the checkbox in the setting-menu is activated?
I'd prefer the old behaviour though.
