Hi guys,

I was thinking to add and maybe sharing my project with GitHub.
Have you suggestions on how to do and how to keep it updated?

Looking at the Ide, I have found the synchronize feature in project> Repo, but I do not know if it's for the same purpose.

Thanks,
Matteo

It is for the same purpose.

Go into your project's directory, run git init, then you'll see when you right click on that project you can synchronize it. Deselect Pull/Push so you can Add every file you want into the repository, make a commit message. Then you can go back, add your credentials for github and push into it.
