Hello,

Would be nice if Asist++ would support auto type deduction. Right now it is impossible to use Assist++ for following example:

```
// Doesn't work
auto styleId = qtf.GetStyleId("text");
styleId.(CTRL + SPACE) // Should show type...
```

```
// Works
Uuid styleId = qtf.GetStyleId("text");
styleId.(CTRL + SPACE)
```

auto is commonly used in moder c++ code and lack of is big drawback.
