Subject: Minor ide improvement when opening 'unknown' file

By 'unknown' I mean file that is not part of project packages and by 'opening' I mean getting to it in any way, e.g. using Ctrl+O open command or clicking on find in files output (the later was the main motivator to this change).

Previously, such file was always open in temp-aux pseudo-package. This caused problem when it would be preferable to have it in e.g. prj-aux.

New behavior opens it in prj-aux or ide-aux if that pseudo-package is selected (otherwise temp-aux is used as before).
