Subject: Connection to the postgres db over ssh tunnel

I have one old app in U++ that uses direct connection to the PostgreSql database. I would like to have more protected connection and not being forced to expose postgres port over the network. I saw example in SshBasics with a tunnel but I have no idea how to make it work with PostgreSql module. Maybe someone of you did it already and could shed some light on it?

Why don't you use a secure DB connection? PostgreSQL has it out of the box.
