U++ now supports IME (text input for 'complicated' languages like chinese) more correctly, on all 3 platforms:

For the support, there are some new methods in Ctrl interface:

```
virtual Point GetPreedit();
```

Should return the position of top left point of insertion point (or Null if widget does not need IME).

```
virtual Font GetPreeditFont();
```

Should return the font to be used for displaying partial input (it looks good if it matches the current font of text).

```
static void CancelPreedit();
```

Client code can call to "abort" the input - e.g. when user moves the cursor by the mouse click.

```
void CancelMyPreedit() { if(HasFocus()) CancelPreedit(); }
```

Similar, with focus test...

Hello Mirek,

Thank you very much for this improvement.

My question is: how are we going to activate or use the preedit in our apps or widgets? (I'd like to test it)

Best regards,
Oblivion

Well, reastically, there are just 4 widgets with text input right now - EditField, LineEdit, DocEdit and RichText. All of them have what counts as "full support" and it works out of box.

If you want to develop your own widget with IME support, well, if it shows Caret, you will have IME (because default implementation of GetPreedit returns caret position). The only thing you eventually need to add is CancelMyPreedit here and there to cancel composition on some actions (e.g. cursor moved).

Hi Mirek,

Looks very elegant!

However, please fix the following on Linux:

```
/home/tom/upp.src/uppsrc/CtrlCore/GtkEvent.cpp:659:4: error: expected expression
      DLOG(GetKeyDesc(kv) << ", pressed: " << pressed << ", count: " <<
CurrentEvent.count);
      ^
```

```
/home/tom/upp.src/uppsrc/Core/Diag.h:158:26: note: expanded from macro 'DLOG'
#define DLOG(x)      @ // To clean logs after debugging, this produces error in release mode
                    ^
```

```
/home/tom/upp.src/uppsrc/CtrlCore/GtkEvent.cpp:669:4: error: expected expression
      DDUMPHEX(kv);
      ^
```

```
/home/tom/upp.src/uppsrc/Core/Diag.h:164:26: note: expanded from macro 'DDUMPHEX'
#define DDUMPHEX(nx) @ // To clean logs after debugging, this produces error in release
mode
                    ^
```

2 errors generated.

Best regards,

Tom

EDIT: Sorry this newbie question here... How do I test the IME support? I just wish to know how it works.

CLANG-mingw, cross-compilation of Linux.
umk uppsrc ide CLANG -bu
Linking...
lld: error: unable to find library -lImm32

It should be imm32, not Imm32. Linux is case-sensitive ...

EDIT: Sorry this newbie question here... How do I test the IME support? I just wish to know how it works.

In windows, you have to add chinese language in settings.

lld: error: unable to find library -lImm32

It should imm32, not Imm32. Linux is case-sensitive ...

Well, it is listed initcaps in reference documentation:

<https://docs.microsoft.com/en-us/windows/win32/api/imm/nf-imm-immgetcontext>

however, I think it will not hurt to lower the case...

Mirek

Mirek
Thanks! That fixed the problem.
