Hi,

i'm looking forward to getting started and followed the ide installation instructions on linux. But I could not.

I unzipped! OK!

I ran the installation script and at the time of building it gave the following error message:

There were errors. (0:00.30)

----- ide/Builders (GCC SHARED POSIX LINUX) (1 / 14)

CppBuilder.cpp

MakeFile.cpp

CCJ.cpp

c++: error: unrecognized command line option '-std=c++14'

c++: error: unrecognized command line option '-std=c++14'

GccBuilder.cpp

MscBuilder.cpp

c++: error: unrecognized command line option '-std=c++14'

c++: error: unrecognized command line option '-std=c++14'

JavaBuilder.cpp

ScriptBuilder.cpp

c++: error: unrecognized command line option '-std=c++14'

c++: error: unrecognized command line option '-std=c++14'

Cocoa.cpp

AndroidProject.cpp

c++: error: unrecognized command line option '-std=c++14'

c++: error: unrecognized command line option '-std=c++14'

AndroidApplicationMakeFile.cpp

AndroidMakeFile.cpp

c++: error: unrecognized command line option '-std=c++14'

c++: error: unrecognized command line option '-std=c++14'

AndroidModuleMakeFile.cpp

AndroidBuilder.cpp

c++: error: unrecognized command line option '-std=c++14'

AndroidModuleMakeFileBuilder.cpp

Blitz.cpp

c++: error: unrecognized command line option '-std=c++14'

c++: error: unrecognized command line option '-std=c++14'

Build.cpp

Install.cpp

c++: error: unrecognized command line option '-std=c++14'

```
c++: error: unrecognized command line option '-std=c++14'
BuilderUtils.cpp
c++: error: unrecognized command line option '-std=c++14'
c++: error: unrecognized command line option '-std=c++14'
ide/Builders: 20 file(s) built in (0:00.21), 10 msec / file
```

There were errors. (0:00.36)
Something went wrong.
Please use make to compile theide and/or notify developers.

What I do?
Thanks!

I tried to upgrade to gcc version to 7.3:
(upgrade)

I tried to upgrade to gcc version to 7.3 and was able to install:
(upgrade)
sudo yum install centos-release-scl
sudo yum install devtoolset-7-gcc*
scl enable devtoolset-7 bash

now installed!

but I can't load the ide:
error

(theide:49476): Gtk-WARNING **: 11:45:19.206: cannot open display:

Do I have to install any graphics component? how do i solve this?

Thanks!

I was able to load the ide.
There's a problem now: I can't make the main screen smaller, that is, I can't see the footer of it.
When trying to resize the ide limits it to a size and even then I can't see it !!! Strange this! how can I solve ?

I don't know why when I changed the compiler from clang to gcc , I restarted the ide it restored the size as the version for windows. (It worked)
