I wrote the following code and i just want to "first print Connection to server.." and then when DB connection is done, want to print "Connection successfull" but it prints both at the same time until DBConnect() function ends, i have tried to separate it using the thread but still the same behaviour, someone could give some idea please, thanks

```
-----  
this->clog.Add("Connecting to the server...");  
this->GetTopCtrl()->Refresh();
```

```
//GuiUnlock LeaveGUIriticalEn;  
this->clog.ScrollTo( this->clog.GetCount() );  
Sleep(1000);  
bool res = false;
```

```
auto c = Async([&] -> bool {  
    return mServerManager.DBConnect();  
});
```

```
try  
{  
    res = c.Get();  
}  
catch(...)  
{  
    LOG("Error while trying exceptions");  
}
```

```
if( res == true )  
{  
    this->clog.Add("Connection successfull!!!!");  
}  
else  
{  
    this->clog.Add("Connection failed!!!!");  
}
```

It follows the expected execution only when i added MessageCtrl notifications, seems like

detaching the current thread or similar
