Subject: BiArray::Create{Head,Tail} with variadic args
Posted by busiek on Tue, 10 May 2022 21:54:45 GMT

For some reason I needed BiArray::Create{Head,Tail}() variadic args version as Array::Create(). Simple patch included. Or should I use pull request since we are using github?

Cheers,
Jakub

Applied & added other missing variants and docs...

BTW, theide refused to apply that patch because of its ending

 T&   Head()   { return *(T *) bv.Head(); }
--
2.25.1

Is this some official format or just some weird accident?

I just used git format-patch. It should be applicable with git apply.

Jakub

OK, I have changed theide to recognize "-- " as EOF, which fixes the problem...
