Some important bugfixes happened in recent weeks so I think it would be good idea to do another release before merging gui_sizeof branch.

Core: IsVoid(String) function to avoid confusion with IsVoid(Value)
Core: LoadFile fixed to be work with special files in POSIX /proc/
Core: BiVector, BiArray Create with constructor parameters
CtrlLib: RichTextView WhenLeftClick, ClearSelection
CtrlLib: FileSel::NoExeIcons to suppress loading of icons from .exe files in background
ide, CtrlLib: Fixed issues with namespace agnostic layouts
ide: git format-patch patch format support
Image: Support for >2G pixel images (ImageBuffer::GetLength now returns size_t)
Draw: Fixed/optimised FlipImage
plugin/tif: Minimal geotiff support via metadata (see reference/geotiff)

If you have any other issues that you would like to see resolved in this release, please leave me a note here.

Hello!

I want to export data from SQLite to PostgreSQL. I took the SQL MultiDB project as a sample. I got an warning compiling, for example:

C:\upp\uppsrc\plugin\sqlite3\Sqlite3Schema.h (36): warning: 'BLOB' macro redefined [-Wmacro-redefined].

I made up for the missing #undef's, please make sure it's good that way.

uppsrc/PostgreSQL/PostgreSQLSchema.h

#undef BLOB
#undef BLOB_

uppsrc/Sql/sch_model.h

#undef TIMESTAMP

Marton

Hello Mirek,

There is also an issue with the upp package size on all platforms that is worth fixing before release. It is recent regression. More details in this thread (Extra file in nightly builds).
