[View Forum Message](#) <> [Reply to Message](#)

```
void OptimiserTest()
{
....
}
```

```
void OptimiserOptions()
{
....
}
```

```
CONSOLE_APP_MAIN
{
  StdLogSetup(LOG_COUT|LOG_FILE);
  HttpRequest::Trace();
  OptimiserOptions();
  return
  OptimiserTest();
  return;
}
```

Took me 3 minutes to figure out why OptimiserTest is being called..

What bad luck. A compiler should have detected two returns in a row.

Your British spelling of Optimizer broke my brain before the second return did :
Are we going to do a global find and replace of Color with Colour next?
