Hi, I upgraded to latest build 16323.

Ctrl Alt F7 "Show assembly code" does not work with this version.
I had a rather old version yesterday and this worked.
My OS is Windows 10 64 bit, german keyboard. I use Clang Compiler.

I do not believe it is a keyboard handling problem, because it worked before and because other keyboard shortcuts work.

Edit:
I tried the stable version, same problem.

Edit2: I switched now to MSVC, didnt work.
Then I switched back to CLangx64, now it works.
Still doesnt work with MSVC, but this is not a problem for me.

Edit3: The problem persists. When I close TheIDE and open it again, then Ctrl Alt F7 doesnt work.
If I switch to MSVC and back to CLANG, then it works.

When I upgraded, I simply copied all new files to my existing C:\upp directory, overwriting old files but not deleting existing files.
Could this be the problem?

Edit4:
I copied now Upp to a completely new empty directory.
Now it seems to work always, however only with CLANG, not with MSVC.
I must however mention my MSVC is not normally installed in windows. It is on an older backup drive and Upp detected it automatically and it seemed to work. I use it only occasionally for testing and comparison. So this could be normal.

Edit5: I think the problem is solved. Reason was the unusual installing method of Upp and MSVC.
