Hi. If i am posting in the wrong forum excuse-me.Now, reporting my problems i use the last stable version 605 and the Assist++ doesn't work!Maybe the problem is that i don't know how to work with Assist++ but look ate the printscreen:

Well and i have another problem.I create a new package, but the new package doesn't appear on the selection project window. See it:

This problems are something that i don't know how to do on U++? Or they exist because are bugs of U++?
Sorry about large images. Thank you for your attention

In the picture I do not see problem. Have you read the documentation about Assist? I mean theide menu bar / Assist / Help index and then select the item Assist++

All the packages have been created created in the same way? or maybe you moved the packages from one directory to another?

Luigi

Assist: Looks like you have empty query. Assist is more tools, the most often you will see the list of methods after pressing '.' or '->'.

Package: I guess your package lacks main configuration. Try to click "All packages" option.
