Hi,

is there any method in skylark that runs e.g. delete the file after the download has finished?

```
   //file download.icpp    --> this operation works fine!

   SKYLARK(dwn, "download:POST")
   {
      String f="C:\\Users\\my\\Downloads\\rProdx.pdf";
      FileIn fi(f);
 String fn=GetFileNamePos(f);
                                                //--> applicaton/pdf it's already set in my ajax!
      String x= "attachment; filename=\"" + fn +"\"";
 ttp.SetHeader("Content-Disposition", "attachment;filename=\"" + fn +"\""
).ContentType("application/pdf") <<  LoadFile(f);
   }
```

something like this ...

```
   SKYLARK(Adwn, "Afterdownload")
   {
        .....
        .....
        String fn="c:\\temp\\test.pdf";
        FindFile f(fn);

        if(f.IsFile()){

            bool b= DeleteFile(fn);

          LOG( "file deleted: " << b << EOL );
        }else{

          LOG( "file not found! " << EOL );
        }

   }
```

Thanks!
