Subject: Switch Text and Designer on large .lay-File

Hi!

I have a large .lay-file containing about 100 different LAYOUTs. I can see the text, but i cant switch to the designer. It doesnt matter if i am in debug or not. It doesnt matter if i try ctrl+t or clicking the button. There is simply no reaction! The switch works on smaller .lay-files, that only contain 1-10 LAYOUTs.

I would appriciate any help.
Best wishes.
