Good afternoon!

I can't figure out how to add a column from a database table. For example , we have tables:

```
TABLE_(table1)
  SERIAL_ (tb1_id)
  STRING_ (name)
  STRING_ (last_name)
END_TABLE
TABLE_(table2)
  SERIAL_ (tb2_id)
  INT_ (tb2_tb1_id) REFERENCES(table1)
  STRING_ (book)
  STRING_ (description)
END_TABLE
```

And I need to display the table:

```
-----
|book | description| name| last_name|
-----
```

Well, is it possible?

Good afternoon!

I faced a similar problem, but also did not find a solution.
