The most important difference is that frames are now transparent.

Painting engine was optimized, should be now faster.

Following complicated Ctrl virtuals are now gone:

```
virtual Vector<Rect> GetTransparentFrameRects();
virtual Vector<Rect> GetOpaqueFrameRects();
virtual Vector<Rect> GetTransparentViewRects();
virtual Vector<Rect> GetOpaqueViewRects();
```

replaced by simple

```
virtual Rect GetOpaqueRect();
```

which can simply return the opaque view rect (and painting engine uses that value to optimize drawing). Default implementation is

```
Rect Ctrl::GetOpaqueRect()
{
    return IsTransparent() ? Rect(0, 0, 0, 0) : GetSize();
}
```
