Good afternoon!

Dear Miroslav!
When testing new versions of TheIDE (16505, 16506 and 165012 in the ALT Linux environment (p10), I encountered the following problem: The intelligent developer assistance system does not work correctly. I will give examples of errors in the screenshots. In version 16506, the problem has become more pronounced. For example, AddressBook.

Sincerely, Andrey
