Hi,

Is there any plan to add support for OPTIONS requests?

I ask, because right now OPTIONS are treated as GET requests and every time a browser sends OPTIONS before GET, my handler is called twice.

As a temporary solution I added GetMethod() to Skylark/http.h to expose method name in skylark handlers.

```
String GetHeader(const char *s) const          { return hdr[s]; }  
String GetMethod() const                       { return hdr.GetMethod(); } //<---
```

And at least i can differentiate GET and OPTIONS
