## Subject: vim mode for the IDE, or vim directly, or even vscode

Totally newbie here. U++ seems a great and free alternatives to Qt for GUIs. I have yet to experience more but before that, I have some basic questions:

1. is there a vim mode for theide?
2. is it possible to develop under vim, or even vscode? I built it with the makefile and it went well, as long as the makefile works I think I'm free to use other editors(vim,vscode), I understand it will not have the ready-to-go-configuration as theide provides.
3. can I theme the GUI somehow(font,color,etc)?
4. is there a GUI designer for this?

It will be really cool if theide can be 'ported' to vscode, probably as an extension then you get all the modern tooling. I just could not live without vim mode myself these days(vscode has vim mode). :(
