Subject: Links in UppHub

Hi,

I tried to load this list into UppHub :

```
{
  "nests": [
    {
      "name": "Archive",
      "packages": [
        "Archive"
      ],
      "description": "Package to read and write many archive files",
      "repository": "git@gitlab.veneto.com:upphub/Archive.git",
      "status": "stable",
      "category": "widget",
      "readme": "https://gitlab.veneto.com/upphub/Archive/-/raw/master/README.md"
    }
  ],
  "links" [
    "https://raw.githubusercontent.com/ultimatepp/UppHub/main/nests.json"
  ]
}
```

It should load the "archive" package, then process the original UppHub path, but it doesn't.
It brings "failed to parse json file".
If I remove the "links" part the file is parsed correctly.

BTW, what happens if I have 2 packages with same name ? For example, if I have the PolyXML inside official upp repo and in my repo too ?

Ciao

Max
