Subject: Problem with keyboard shortcuts not working
Posted by peterh on Thu, 15 Dec 2022 14:17:17 GMT

Hello, I use the shortcut Ctrl Alt F7 sometimes to see the generated assembly code.

Sometime it works and sometimes it doesnt and I believe I found the reason:

It works when I have a fresh download. However, when I download a new version of Upp and unpack this into the existing C:\Upp path, then after I did this, the shortcut does not work anymore.

I believe this affects other shortcuts too and some others not, but for the Ctrl Alt F7 I am rather sure it is reproducible.

Is there a possibility to avoid the problem, or a workaround?

The problem is fixed if I delete C:\Upp\cfg.
It is then regenerated, but I loose partially my configuration.
