code first:

case 1:

```
r = pcList.GetRect(); // pcList is a ParentCtrl
sz = pcList.GetSize(); // sz = {316, 167}
acltemList.HSizePosZ().VSizePos(); // acltemList is an ArrayCtrl
acltemList.AddColumn("item");
acltemList.AddColumn("time");
pcList.Add(acltemList);
r = acltemList.GetRect(); // r = {0, 0, 316, 167}
```

case 2:

```
r = pcList.GetRect(); // pcList is a ParentCtrl
sz = pcList.GetSize(); // sz = {316, 167}
acltemList.HSizePosZ().TopPos(0, sz.cy); // acltemList is an ArrayCtrl, only difference is here,
vertical layout method
acltemList.AddColumn("item");
acltemList.AddColumn("time");
pcList.Add(acltemList);
r = acltemList.GetRect(); // r = {0, 0, 316, 167}
```

in both cases, r and sz are same, but in case2, there is a strang gap.
