code first:

case 1:

```
r = pcList.GetRect(); // pcList is a ParentCtrl
sz = pcList.GetSize(); // sz = {316, 167}
acItemList.HSizePosZ().VSizePos(); // acItemList is an ArrayCtrl
acItemList.AddColumn("item");
acItemList.AddColumn("time");
pcList.Add(acItemList);
r = acItemList.GetRect(); // r = {0, 0, 316, 167}
```

case 2:

```
r = pcList.GetRect(); // pcList is a ParentCtrl
sz = pcList.GetSize(); // sz = {316, 167}
acItemList.HSizePosZ().TopPos(0, sz.cy); // acItemList is an ArrayCtrl, only difference is here,
vertical layout method
acItemList.AddColumn("item");
acItemList.AddColumn("time");
pcList.Add(acItemList);
r = acItemList.GetRect(); // r = {0, 0, 316, 167}
```

in both cases, r and sz are same, but in case2, there is a strang gap.
