Hi,

There is a strange FileSel + DisplayPopup crash in the last release and current version. Here's a minimal testcase:

```
#include <CtrlLib/CtrlLib.h>
```

```
using namespace Upp;
```

```
GUI_APP_MAIN
```

```
{  
  {  
    FileSel fs;  
    fs.ExecuteOpen();  
  }  
  PromptOK("With a DisplayPopup you will not get this far!");  
}
```

Please run the above code in debugger and open a file with a long name while it's displayed in a DisplayPopup to show the entire filename. A double click on a long filename will do.

I think the callback posted from DisplayPopup's WhenClose is late from object destruction and freeing the memory crashes.

Best regards,

Tom

Hi,

Thanks! Works again.

BR,

Tom

Thank you so much. This also fixed the issue I was posting about in the other thread.
