
Subject: how to add compiler

Hi All,

Just getting started with U++, 16660, Windows. On install, it found most of the compilers, and I have .bm files for MSVS19x64, MSVS19, MSBT19x64, MSBT19, MSBT17x64, MSBT17, and Clang. But now I'm trying to add minGW, and no .bm file is being written for it. When I close TheIDE and reopen it, the compiler info on >Setup>Build_methods is still there, unchanged, but still no new file is being written. Is there a limit on the number of compilers? Have I left something out? :roll:

thanks,
Gary
